

Garden beds 17A, B, C, D and E: Senses Garden beds. These series of Garden beds may be found on both sides of the driveway leading down to the toilet amenities. The **Senses Garden** itself is located in Garden bed 17C. Garden bed 17D features a large swamp cypress (*Taxodium distichum*). The Garden edge on the southern side of the driveway is designated as the final in this series, i.e. Garden bed 17E. These Garden beds are likely to be further developed.

In summer, these Garden beds can be home to the Golden Orb Weaving Spiders (*Nephila plumipes*), weaving their stunning golden webs among the camellias and other garden shrubs. These spiders are native to the Sydney Region, feeding on flies, beetles and wasps, and their presence can be identified by the strong golden webs that they weave; the females are large - up to 5 cm across. They are reluctant to bite and are non-venomous, but for further information see <http://australianmuseum.net.au/Golden-Orb-Weaving-Spiders>.

AREA A

Family: Theaceae

Garden bed 17A

Code Number	Camellia Name	Flower Photo (if available)	Description, Origin and Registration Number	Flowering Period
